MOTGUM

Motgum jest producentem szerokiej gamy najwyższej jakości wycieraczek szyb do samochodów osobowych, ciężarowych i autobusów

Produkujemy pióra o długościach od 280 mm do 1400 mm.

Nasze wyroby spełniają najbardziej rygorystyczne wymogi jakościowe, czego dowodem jest fakt, iż są montowane jako wyposażenie seryjne wielu aut.

Jeśli pragniesz dowiedzieć się więcej – odwiedź naszą witrynę internetową:

www.motgum.com, napisz na adres: motgum@motgum.com lub skontaktuj się z nami telefonicznie. Prześlemy Ci naszą najnowszą ofertę i odpowiemy na wszystkie pytania.

Tel. +48 22 789 37 12, +48 22 789 47 58

Motgum is a manufacturer of wide range of highest-quality windscreen wipers for passenger cars, trucks and buses

Motgum manufactures wiper blades ranging from 11" (280 mm) up 55" (1400 mm).

Our products meet the most rigorous standards in automotive industry. Often, you will find them as Original Equipment of many cars.

If you wish to learn more please visit our website at: www.motgum.com,

write an e-mail to: motgum@motgum.com or simply make a phone call: Tomasz Perczyński (English) tel. +48 601 26 08 78, Zbigniew Kukla (Russian) tel. +48 603 68 54 07.

We will provide you with the newest offer and answer all your questions.

Komplety pióro + ramię metalowe / Wiper blades and metal arm sets	90
Ramiona wycieraków do samochodów ciężarowych i autobusów / Wiper arms for trucks and buses	91

PL

Pióra Motgum swoje niepowtarzalne właściwości użytkowe zawdzięczają najwyższej jakości materiałom i komponentom użytym do ich produkcji.

Odporność antykorozyjna: powyżej 240 godzin (test w komorze solnej, kryteria wg ISO 9227).

Guma wycieraka – wykonana z mieszanki opartej wyłącznie na kauczuku naturalnym (bez elastomerów syntetycznych) oraz 12-tu innych komponentach chemicznych z dodatkiem grafitu, polepszającego współczynnik tarcia i niwelującego głośną pracę wycieraczki. Użycie grafitu na etapie przygotowania mieszanki powoduje iż nie osadza się on na szybie, co bywa częstym zjawiskiem w wycierakach konkurencyjnych firm, które są grafitowane jedynie powierzchniowo. Gummy wycieraków MOTGUM spełniają wymagania norm FIAT i GM w zakresie własności mechanicznych, skuteczności wycierania i odporności ozonowej.

Boczne listwy sprężyste – wykonane ze stali kwasoodpornej, gat. 1.4310 (2H18N9) o wytrzymałości powyżej 1800 N/mm².

Części metalowe (dźwignie) – wykonane z blachy stalowej o podwyższonej wytrzymałości. Alu-cynkowa powłoka antykorozyjna o grubości powyżej 25 mikrometrów.

Elementy z tworzywa – PBT (politereftalan butylu) - tworzywo techniczne o doskonałych właściwościach mechanicznych i wysokiej odporności na warunki atmosferyczne.

Pokrycia – farba: żywica poliestrowa wysoce odporna na promienie UV oraz warunki atmosferyczne (sole, kwasy, zanieczyszczenia pochodzące ze spalin).

Wszystkie pióra wycieraków spełniają wymagania określone w specyfikacjach FIAT 9.93605 oraz GM EDS-M-7501 w zakresie funkcjonalności i własności materiałowych. Proces produkcyjny jest okresowo oceniany i kwalifikowany przez głównych odbiorców.

Prowadzimy także pełne badania okresowe dla potrzeb zapewnienia stabilności poziomu jakościowego.

EN

All Motgum wiper blades owe their unique functional properties to highest-quality materials and components used in the manufacturing process.

Anti-corrosion resistance: above 240 hours (salt chamber test, criterion according to ISO 9227).

Rubber blade – made of compound based only on natural rubber (without synthetic elastomer) and 12 other chemical components with graphite supplement, improving coefficient of friction and eliminating operational noise. Use of graphite at the stage of blending the compound eliminates graphite residues on the windshield, which often takes place with competitive products that are only surface-coated. MOTGUM wiper blades and rubbers fully comply to FIAT and GM industry standards regarding mechanical properties, wiping effectiveness and ozone resistance.

Side flat springs – made of acid-resistant steel, 1.4310 (2H18N9) with resistance exceeding 1800 N/mm².

Metal elements (brackets) – made of extra-durable steel metal sheets with anti-corrosion, alu-zinc coating exceeding 25 micrometer.

Plastics – made of PBT (Polybutylene Terephthalate) – technical resin with perfect mechanical properties and high resistance to environmental conditions.

Coating – paint: polyester resin with high resistance on UV and atmosphere conditions (salts, acids, air pollution).

All wiper blades meet strict demands of FIAT 9.93605 and GM EDS-M-7501 norms in the scope functionality and material properties. Production process is periodically evaluated and classified by main customers. MOTGUM also conducts internal, periodical tests to assure stable, highest-quality level.

PL

PIÓRA STANDARD DO SAMOCHODÓW OSOBOWYCH

Pióra standard do samochodów osobowych produkowane w długościach od 280 do 700 mm.

Wycieraczki standardowe charakteryzuje uniwersalność zastosowań.

Dzięki kompletnemu systemowi adaptorów pióra pasują do wszystkich samochodów osobowych produkowanych przez koncerny motoryzacyjne na całym świecie (patrz katalog).

Pióra standardowe zawdzięczają niepowtarzalne właściwości użytkowe najwyższej jakości materiałom i komponentom użytym do ich produkcji.

EN

STANDARD WIPER BLADES FOR PASSENGER CARS

Wiper blades for passenger cars standard are produced in sizes from 11" (280mm) up to 28" (700 mm). Their main feature is versatility. Thanks to a complete system of adaptors they are suitable for all kinds of cars produced and assembled all over the world (c.f. catalogue).

Standard wiper blades owe its unique functional properties to best-quality materials and components used in production.

PL

PIÓRA ZE SPOJLEREM DO SAMOCHODÓW OSOBOWYCH

Pióra ze spojlerem do samochodów osobowych produkowane w długościach od 430 do 600 mm.

Oparte na solidnej konstrukcji piór standardowych, wycieraczki wyposażone w spojler zapewniają najwyższą skuteczność wycierania przy dużych prędkościach jazdy.

Konstrukcja i kąt nachylenia spojlera całkowicie niwelują „odklejanie się” wycieraczki od szyby.

Pióra ze spojlerem są stosowane jako lewe (od strony kierowcy).

EN

WIPER BLADES WITH SPOILER FOR PASSENGER CARS

Wiper blades with spoiler for passenger cars are produced in sizes from 17" (430 mm) up to 24" (600 mm).

Based on solid standard wiper blades construction, wipers with spoiler ensure best wiping performance at high driving speeds. Their construction and spoiler inclination angle completely eliminate the wiper losing grip on the glass. Spoiler wiper blades are only used on the left (driver) side.

PIÓRA DO SAMOCHODÓW CIĘŻAROWYCH I AUTOBUSÓW O DŁUGOŚCIACH OD 500 DO 1400 MM

PL

Wzmocnioną konstrukcję tych piór zapewniają nitowane połączenia, co ma niebagatelne znaczenie przy długościach wycieraczek stosowanych w samochodach ciężarowych i autobusach. Specjalny system adaptorów umożliwia zastosowanie praktycznie we wszystkich markach i modelach samochodów ciężarowych i autobusów produkowanych na świecie (patrz katalog).

WIPER BLADES FOR BUSES AND TRUCKS 20" (500 MM) – 55" (1400 MM)

EN

Improved stiffness and reinforced construction of these blades are provided by super-strong rivet joints, which is of key importance to long wiper blades used in trucks and buses. Special system of adaptors allows use in almost every brand and model of heavy-duty vehicles produced around the world (c.f. catalogue).

PIÓRA PŁASKIE DO SAMOCHODÓW OSOBOWYCH

PL

Pióra płaskie do samochodów osobowych produkowane w długościach od 330 do 700 mm. Pióra te nie mają opraw metalowych. Wkładka gumowa obsadzona jest bezpośrednio w sprężystych listwach pióra i dzięki odpowiedniemu kształtowi pióro stawia mały opór powietrza.

Taki kształt gumy oraz brak metalowego szkieletu sprawia, że całe pióro lepiej przylega do szyby. W wycieraczki płaskie wyposażona jest aktualnie większość nowych samochodów.

FLAT WIPER BLADES

EN

Suitable for passenger cars with wipers ranging from 13" (330 mm) up to 28" (700 mm). They do not have metal supporting frame. Rubber blade is attached directly to side springs and, thanks to specific shape, blades stay as aerodynamic as they possibly can.

Special shape of rubber blade and lack of metal frame improve adhesion to the windshield. Majority of new cars are equipped in flat wiper blades.

PIÓRA HYBRYDOWE

PL

Pióro hybrydowe Motgum to odpowiedź firmy na najnowszy światowy trend w produkcji wycieraczek szyb samochodowych.

Pióro to łączy w sobie nienaganną pracę wycieraczki standardowej z nowoczesnym wyglądem.

Obudowa z tworzywa zakrywająca solidną metalową konstrukcję znacznie poprawia aerodynamikę pióra i w dużym stopniu kształtuje jego estetykę.

Odpowiednio dobrana liczba podpór konstrukcji metalowej zastosowana w wycieraczce hybrydowej pozwala na idealne rozłożenie siły docisku pióra niezależnie od kształtu szyby.

Pióra hybrydowe pasują do wielu europejskich, japońskich i koreańskich samochodów oraz mogą zastąpić wszystkie pióra standardowe do ramion o mocowaniu hakowym, a także pióra płaskie z mocowaniem do ramion z bocznym bolcem (Motgum TypB) bez dodatkowych adaptorów czy składanych multi-clipów.

Wprowadzając pióra hybrydowe do naszej oferty wychodzimy naprzeciw użytkownikom wielu samochodów, w których pióra te są zamontowane fabrycznie, takich jak Opel, Citroen, Toyota, Lexus, Mitsubishi, Peugeot, Subaru, Mazda i wiele innych.

HYBRID WIPER BLADES

EN

Motgum's hybrid wiper is our bold attempt to answer a worldwide trend in manufacturing ultra-modern car wiper blades.

Hybrid wiper blades combine perfect performance of standard wipers and stylish design of their flat blade counterparts.

Plastic resin casing which encapsules all-metal construction vastly improves aerodynamics and gives a new meaning to modern wiper blade look and design.

Using multiple metal brackets hidden beneath a stylish cover enables the blade to ideally spread pressure on even most-curved windscreens, thus vastly improving the wiping performance.

Motgum hybrid wiper blades fit many European, Japanese and Korean cars, freely replacing standard wiper blades with hook-fitting, as well as flat wiper blades with side-fitting (Motgum Type B). And most importantly - without the need to use additional adaptors or complicated multi-clips.

By introducing hybrid wiper blades into our offer, we would like to meet the needs of users of vehicles that have these blades factory-installed, such as Opel, Citroen, Toyota, Lexus, Mitsubishi, Peugeot Subaru, Mazda and many others.

PL

RAMIONA WYCIERAKÓW PRZEZNACZONE DO SAMOCHODÓW OSOBOWYCH I CIĘŻAROWYCH

Spśród całej gamy naszych wyrobów, ramiona wycieraczek charakteryzują się najwyższą odpornością antykorozyjną. Poddawane rygorystycznym testom w komorze solnej, uzyskują wynik powyżej 400 godzin (kryteria wg ISO 9227).

Zwarta konstrukcja i zastosowanie najwyższej jakości materiałów zapewniają ramionom doskonałą sztywność.

Części metalowe:

- wykonane z blachy stalowej o podwyższonej wytrzymałości, pokrywane alu-cynkową powłoką antykorozyjną o grubości powyżej 25 mikrometrów;
- walcowane, ocynkowane pręty stalowe o podwyższonej sztywności (gat. C45), z kalibrowaną końcówką do połączenia z piórem;
- głowice mocujące wykonane z aluminium lub stopu aluminium i cynku;
- tuleje i nity wykonane precyzyjnie na automatach tokarskich z atestowanych materiałów, odpornych na korozję;
- sprężyny i łączniki w wykonaniu specjalnym (mat. gat. CII) – o zaokrąglonych wymaganiach dla własności dynamicznych. Zapewniają właściwy nacisk zespołu pióro-ramię na szybę w każdych warunkach.

Osłona głowicy – PBT (politereftalan butylu) – tworzywo techniczne o doskonałych właściwościach mechanicznych, o wysokiej udarności i odporności na niskie i wysokie temperatury.

Pokrycia – farba: żywica poliestrowa odporna na promienie UV oraz na warunki atmosferyczne (sole, kwasy, zanieczyszczenia pochodzące ze spalin).

Ramiona wycieraczek MOTGUM spełniają wymagania określone w specyfikacjach FIAT 9.93606 oraz GM EDS-T-3409 w zakresie funkcjonalności i własności materiałowych. Proces produkcyjny monitorowany jest przy zastosowaniu metod statystycznych. Produkcja jest okresowo oceniana i kwalifikowana przez głównych odbiorców. Prowadzimy także pełne badania okresowe dla potrzeb zapewnienia stabilności poziomu jakościowego.

EN

WIPER ARMS – SUITABLE FOR PASSENGER CARS AND TRUCKS

Throughout whole range of our products, wiper arms characterized by the best anti-corrosion resistance. Put to harsh testing in salt chamber, they gain results above 400 hours (criterion according to ISO 9227).

Rigid construction and use of best-quality materials ensure superb stiffness.

Metal parts:

- made of steel sheets with increased durability, covered with anti-corrosion alu-zinc coating exceeding 25 micrometer;
- rolled, zinc steel bar with increased stiffness (C45), calibrated endings to join with blades;
- arm heads made of aluminium or alu-zinc alloys;
- precision cases and PBT rivets machined on turners with approved materials, resistant to corrosion;
- springs and connectors of special performance (CII) – with sharpened demands for dynamic features. They assure proper pressure blade-arm group on glass in all conditions.

Head guard – PBT (Polybutylene Terephthalate – industrial plastic with superb mechanical properties, high impact resistance and durability in extreme temperatures.

Coating – polyester resin paint with high resistance on UV and weather conditions (salts, acids, air pollution).

Wiper arms of MOTGUM meet demands determined in FIAT 9.93606 and GM EDS-T-3409 specifications regarding functionality and material features. Production process is monitored using statistical methods, as well as periodically evaluated and classified by main customers. MOTGUM also conducts internal, periodical tests to assure stable, highest-quality level.

PL

WYCIERAKI PANTOGRAFICZNE

Jest to grupa produktów przeznaczona do autobusów, kabin ciągników rolniczych i szyb elektrowozów. Rozwiązania techniczne zastosowane w naszych wycierakach pantograficznych gwarantują doskonałą dokładność wycierania na bardzo dużych powierzchniach szyb. Dlatego stosuje się je m.in. w autobusach, kabinach ciągników rolniczych i szybach elektrowozów.

Pantografy MOTGUM dziedziczą trwałość i najlepsze cechy piór do samochodów ciężarowych (wytrzymałość i sztywność konstrukcji) oraz ramion wycieraków (wysoka odporność antykorozyjna).

Części metalowe (dźwignie, ramiona, prostowody):

- wykonane z blachy stalowej o podwyższonej wytrzymałości, pokrywane alu-cynkową powłoką antykorozyjną o grubości powyżej 25 mikrometrów;
- walcowane, ocynkowane pręty stalowe o podwyższonej sztywności (gat. C45), z kalibrowaną końcówką do połączenia z piórem;
- głowice mocujące wykonane z aluminium lub stopu aluminium i cynku;
- tuleje i nity wykonane precyzyjnie na automatach tokarskich z atestowanych materiałów, odpornych na korozję materiałów;
- sprężyny i łączniki w wykonaniu specjalnym (mat. gat. CII) – o zaokrąglonych wymaganiach dla własności dynamicznych. Zapewniają właściwy nacisk zespołu pióro-ramię na szybę w każdych warunkach.

Guma wycieraka - wykonana z mieszanki opartej wyłącznie na kauczuku naturalnym (bez elastomerów syntetycznych) oraz 12-tu innych komponentach chemicznych z dodatkiem grafitu, polepszającego współczynnik tarcia i niwelującego głośnie pracę wycieraczki. Użycie grafitu na etapie przygotowania mieszanki powoduje iż nie osadza się on na szybie, co bywa częstym zjawiskiem w wycierakach konkurencyjnych firm, które są grafitowane jedynie powierzchniowo. Gumi wycieraków MOTGUM spełniają wymagania norm FIAT i GM w zakresie własności mechanicznych, skuteczności wycierania i odporności ozonowej.

Wycieraki pantograficzne MOTGUM spełniają wymagania określone w specyfikacjach FIAT 9.93605 oraz GM EDS-M-7501 w zakresie funkcjonalności i własności materiałowych. Proces produkcyjny monitorowany jest przy zastosowaniu metod statystycznych. Prowadzimy także pełne badania okresowe dla potrzeb zapewnienia stabilności poziomu jakościowego.

PANTOGRAPHIC WIPER BLADES

A group of products specially designed for, agricultural machines and other special-purpose vehicles. Technical solutions used in MOTGUM pantographic wiper blades guarantee perfect precision of wiping on very big windshields. Therefore they are commonly used in i.e. busses, tractors and special-purpose electrical vehicles. MOTGUM's pantographs inherit their heavy-duty properties from best features found in blades for trucks (durability and construction stiffness) and wiper arms (high anti-corrosion resistance).

Metal parts (levers, arms, bars):

- made of steel sheets with increased durability, covered with anti-corrosion alu-zinc coating exceeding 25 micrometer;
- rolled, zinc steel bar with increased stiffness (C45), calibrated endings to join with blades;
- arm heads made of aluminium or alu-zinc alloys;
- precision cases and rivets machined on turners with approved materials, resistant to corrosion;
- springs and connectors of special performance (CII) – with sharpened demands for dynamic features. They assure proper pressure blade-arm group on glass in all conditions.

Rubber blade – made of compound based only on natural rubber (without synthetic elastomer) and 12 other chemical components with graphite supplement, improving coefficient of friction and eliminating operational noise. Use of graphite at the stage of blending the compound eliminates graphite residues on the windshield, which often takes place with competitive products that are only surface-coated. MOTGUM wiper blades and rubbers fully comply to FIAT and GM industry standards regarding mechanical properties, wiping effectiveness and ozone resistance.

Side flat springs – made of acid-resistant steel, 1.4310 (2H18N9) with resistance exceeding 1800 N/mm².

Plastics – made of PBT (Polybutylene Terephthalate) – technical material with perfect mechanical properties and high resistance to environmental conditions.

Coating – paint: polyester resin with high resistance on UV and atmosphere conditions (salts, acids, air pollution).

Pantographic wiper arms of MOTGUM meet demands determined in FIAT 9.93606 and GM EDS-T-3409 specifications regarding functionality and material features. JAKOŚĆ WYCIERANIA JEST WYNIKIEM WSPÓŁPRACY ELEMENTÓW SKŁADOWYCH UKŁADU:

1. pióra wycieraczki
2. szyby samochodu i płynu spryskiwacza
3. ramienia wycieraczki
4. układu napędowego wycieraczek

AD 1 Pióro wycieraczki jest wykonane z elementów metalowych, tworzywa sztucznego i gumy. Specjalna mieszanka gumowa z której zrobiono wkładkę jest odporna na niskie i wysokie temperatury, promieniowanie UV, jak i alkohole używane w płynach spryskiwaczy.

Niestety nic nie jest wieczne, a czas i eksploatacja robią swoje. Guma w końcu twardnieje, robi się mało elastyczna i krucha. Na zniszczenie najbardziej narażone jest tzw. żądło gumy. Tarcie o twardszą szybę powoduje zaokrąglenie jego krawędzi, co z kolei prowadzi do spadku skuteczności wycierania. Pojawiają się liczne smugi. W miesiącach zimowych niejednokrotnie dochodzi do naderwania lub całkowitego zniszczenia żądła gumy.

W takim przypadku musimy bezwzględnie wymienić pióro, gdyż twarde, metalowe elementy mogą porysować nam szybę, co narazi nas na wysokie koszty jej wymiany!

AD 2 W trakcie eksploatacji auta zużyciu ulega nie tylko guma wycieraczki ale i pozostałe elementy układu. Powierzchnia szyby auta jest nieustannie bombardowana drobinami piasku, kamykami, kurzem i błotem. Im starsze auto, im większy przebieg - tym bardziej zniszczona szyba. W mikroskopowym powiększeniu widać, że jej powierzchnia jest porowata niczym pumeks. Pozostałości olejów i smarów unoszone z powierzchni drogi, resztki owadów, woski z preparatów myjących mające chronić lakier auta dostają się w pory na powierzchni szyby. Wszystkie te czynniki mają wpływ na jakość wycierania i żywotność gumy.

Dlatego zaleca się po myciu samochodu dokładne, ręczne umycie szyby przy pomocy preparatów przeznaczonych do mycia szyb. Zabieg ten odłuszczy szybę, usunie resztki owadów, wosków i innych zanieczyszczeń.

Trzeba także pamiętać o stosowaniu odpowiednich płynów do spryskiwaczy. Bardzo skoncentrowany, nieodpowiedni płyn wcale nie musi lepiej zmywać, a wręcz przeciwnie może mieć destrukcyjny wpływ na gumę wycieraczki, skracając jej żywotność.

W trakcie naszych badań laboratoryjnych zaobserwowaliśmy, że jeśli nie ma dużych mrozów najlepszy efekt wycierania uzyskuje się przy delikatnym rozcieńczeniu płynu zimowego wodą destylowaną lub demineralizowaną. Zwykła woda może pozostawić kamień w zbiorniku, przewodach i dyszach spryskiwaczy!

AD 3 Bardzo ważnym, a niedocenianym elementem układu wycieraczek jest ramię.

Siła docisku pióra pochodząca od sprężyny w ramieniu maleje wraz z eksploatacją auta i może spowodować złą skuteczność wycierania nawet nowych wycieraczek. Sól, błoto, piach i kurz powodują zacieranie się ruchomego przegubu ramienia, co zmniejsza docisk pióra do szyby, a w konsekwencji wycieraczki źle działają. Na szybie pojawiają się smugi i nie wytarte fragmenty.

W skrajnych przypadkach obserwowano brak jakiegokolwiek docisku, a więc pióro w ogóle nie wycierało! W takiej sytuacji można próbować poprawić ruchomość przegubu smarując go penetrującym olejem w aerozolu, kilkakrotnie odginając i kładąc ramię na szybę.

Prawidłowa siła docisku ramienia jest szczególnie istotna przy zastosowaniu piór płaskich – bezdźwigniowych!

Jeśli ramię z jakichś przyczyn zostało przegięte (np. auto po stłuczkach, wadliwe szczotki myjni automatycznej itp.) praca pióra objawiać się może skakaniem lub zgrzytaniem, szczególnie w jedną stronę. Żądło pióra musi być ustawione prostopadle do powierzchni szyby. Jest to bardzo często spotykany problem i w takim przypadku należy skorygować geometrię ramienia lub je po prostu wymienić.

AD 4 Ostatnim elementem jest układ napędowy wycieraczek. W starszych samochodach często dochodzi do zatarcia trzpieni na których osadzone są wycieraczki jak i elementów ślizgowych układu dźwigniowego ukrytego w podsztybiu. Piski i nierówna, szarpana praca wycieraczki może być tego oznaką. Z reguły są to elementy nierozbieralne, ale użycie paru kropli penetrującego smaru - oleju może nam na jakiś czas wyeliminować to zjawisko.

Także zbyt duże luzy układu powstałe na skutek eksploatacji mogą prowadzić do nieprawidłowej pracy wycieraczek. Zmienia się cała geometria układu w sposób niekontrolowany i objawy mogą być identyczne – szarpana, nierówna praca, a nawet uderzanie pióra w uszczelkę szyby. Niestety w takim przypadku jesteśmy zmuszeni wymienić cały układ napędowy wycieraczek.

Wszystkie zawarte tu spostrzeżenia wynikają z przeszło trzydziestoletniego doświadczenia i badań laboratoryjnych naszej firmy. Mieliśmy na celu zwrócenie uwagi jak skomplikowaną i ważną częścią Państwa samochodu są wycieraczki. Dbajmy o każdy z elementów tego układu. Zakup tylko sprawdzonych produktów uznanych producentów mających wieloletnie doświadczenie gwarantuje jakość, Państwa bezpieczeństwo i komfort podróżowania w czasie deszczu.

W przypadku dodatkowych pytań prosimy o e-mail na adres: motgum@motgum.com

QUALITY OF CLEANING COMES OUT FROM THE INTERACTION OF SYSTEM COMPONENTS:

1. windscreen wiper
2. windscreen surface and washer fluid
3. wiper arm
4. wiper drive system

AD 1 Wiper blade is made of metal elements, plastic and rubber. Special rubber compound of which the filler is made, is resistant to low and high temperatures, UV radiation, as well as to alcohol used in washer fluids.

Unfortunately, nothing is everlasting, so time and usage do their work. With time, rubber becomes hard, loses its elasticity and becomes fragile. So-called edge is exposed to destruction. Friction against firmer glass leads to rounding of edges which results in worse quality of cleaning. Numerous trails appear. In winter time rubber edge often snatches or becomes fully damaged.

In this case we have to replace a blade unconditionally because hard metal elements can scratch the glass, the replacement of which can be very costly!

AD 2 In the course of car usage both screen wiper rubber and other components of system are getting worn up. The surface of glass is constantly bombarded by sand particles, stones, dust and dirt.

The older the car, the higher mileage it has, the more the windscreen is damaged. Under a microscope its surface looks like porous pumice.

Residues of oils and greases raised from a road surface, insects, wax from car wash cleansers for varnish covering protection, get in porous glass surface.

All these factors influence the quality of cleaning and rubber lifetime.

Therefore, it is recommended after the car is washed to wash up windscreen manually with chemicals specially designed for windscreen wash. This treatment will allow to remove grease from glass, remove the remains of insects, wax and other pollutions.

It is also necessary to remember to apply special liquids for sprinklers. Highly concentrated, not proper liquid will not wash better at all. On the contrary - it can have a destructible effect on rubber blade, shortening its lifespan.

During our laboratory research we have noted that in moderate temperatures, the best cleaning effect is reached with a little winter washer slightly diluted with distilled or demineralized water. Tap water can leave deposit in a tank, pipelines and sprinkler hoses!

AD 3 The wiper arm is very important and underestimated element of screen wipers system.

The strength of blade pressure against windscreen coming from the spring in the arm weakens with car age and can cause a bad quality of cleaning even with a new screen wipers. Salt, dirt, sand and dust lead to abrasion of moving arm joint. This weakens strength of blade pressure and results in improper operation of wipers. Trails and unwiped sectors may appear on a windscreen.

In extreme cases, absence of any pressure was observed, meaning that the blade did not wipe at all! In this case you can try to improve joint mobility, greasing it with penetrating oil in aerosol, straightening and lowering the arm back on a screen a few times.

A proper strength of arm pressure is especially important if you use flat (frameless) wiper blades!

If the arm was bent for any reason (e.g. the car after accident, defective brushes in automatic car wash, etc.) blade can jump up and produce grating sounds during operation, especially on one side. The blade edge should be perpendicular to glass surface. This problem is very frequent and it might be necessary to correct arm's geometry or simply replace it.

AD 4 The last element is a drive system of screen wipers. In old cars, abrasion of pins on which screen wipers are settled may occur, as well as damage of sliding elements of lever system hidden under the screen bottom part. It can assert itself in jerks and irregular wiping performance. As a rule, these elements are assembled as one part, but several drops of penetrating oil can help for some time.

Bad performance of wipers can also be caused by too big gaps, resulting from usage. Whole system geometry changes in uncontrollable way, and signs can be identical: jerking, irregular work, and even blade hitting the glass seal. Unfortunately, in this case it is necessary to replace the whole wiper drive system.

All above observations result from thirty years of experience and laboratory research by our company. Our aim was to draw your attention to the fact how complex and important part of your car the screen wipers are. Take care of each element of this system. Buy only proved products of known manufacturers with long-term experience that guarantee quality, safety and comfort travel in bad weather.
